### EDUCATION

---

University of Massachusetts – Amherst  
Ph. D. candidate in Marketing (ABD)

Amherst, MA  
2022 – 2027 (expected)

Kharazmi University  
Master of Business Administration (MBA)

Tehran, Iran  
2016-2019

Shiraz University of Technology  
B. Sc. in Industrial Engineering

Shiraz, Iran  
2012-2016

### RESEARCH OVERVIEW

---

My research examines how consumers experience, evaluate, and respond to digital and technology-enabled market offerings, with a focus on recurring consumption and emerging technologies. My research is problem-focused and employs multiple methodologies, including in-depth interviews, netnography, experiments, and text analysis.

### DISSERTATION

---

The Weight of Convenience:

Subscription Fatigue, Coping, and Sources of Stress in Recurring Consumption

*Committee: Elizabeth Miller and George Milne (co-chairs), Matthew Godfrey, Annie Ding, and Jessica Pearlman (Research Methods)*

Proposal defended June 2026.

This dissertation examines subscription fatigue as a portfolio-level consumer experience that emerges as individuals manage multiple recurring consumption commitments across categories such as streaming, software, delivery, fitness, news, and digital services. While prior research has largely examined subscriptions from firm-centered perspectives of access, retention, and monetization, this project shifts attention to the cumulative cognitive, emotional, and financial burden consumers experience when managing subscription portfolios over time. Using a sequential qualitative design, the dissertation combines semi-structured interviews and netnographic fieldwork in online consumer communities to examine how consumers experience subscription fatigue, how they cope with it, and which subscription structures create or intensify recurring marketplace stress. The dissertation contributes to consumer research, coping theory, and responsible subscription design by developing a consumer-centered account of how recurring-payment systems shape marketplace burden, coping, and continued participation.

## TEACHING

---

Teaching Interests: Marketing Research, Principles of Marketing, Consumer Behavior, Text Mining, Qualitative Methods, Marketing Analytics, Digital Marketing

Instructor (University of Massachusetts-Amherst)

- Fall 2025, Marketing Research (MKTG 412), rating: 4.5/5
- Spring 2025, Marketing Research (MKTG 412), rating: 3.3/5 (not representative, low participation rate (24%))
- Fall 2024, Marketing Research (MKTG 412), rating: 4/5

Teaching Assistant (University of Massachusetts-Amherst)

- Spring 2026, Small Business Marketing (MKTG 486), Prof. A. B. Kronick

Teaching Development

- Teaching Seminar – PhD Student Teaching (2021-2023)
- AMS Excellence in Marketing Education (Generative AI) (2026)

## AWARDS AND HONORS

---

- Society of Sigma Xi, 2026
- Harold E. Hardy Scholarship, Graduate Program, University of Massachusetts Amherst, 2024
- Full scholarship, Doctoral Program, University of Massachusetts Amherst, 2022
- Doctoral Fellowship, Isenberg School of Management, UMass Amherst, 2022

## PROFESSIONAL SERVICE

---

Reviewer:

- SCP Conference (2026)
- AMS Conference (2026)

## APPENDIX: (SELECTED) RESEARCH PAPER ABSTRACTS

---

### Thinking about the Future, Feeling the Present: The Consumer Robot Typology

Consumers have varied emotional reactions to robots; some love them, some hate them, and others are ambivalent. These emotions have important implications for robot technology acceptance, yet firms adopting these technologies cannot easily assess consumers' feelings toward robots. We address this gap by developing a two-dimensional psychographic segmentation scheme based on consumers' future-oriented cognitions about robots, which we name the Consumer Robot Typology (CRT). Drawing on construal-level and emotion theories, we propose that CRT segments differ systematically in their current emotional responses and, in turn, their acceptance of robot technologies. Using biometric and self-reported data across three studies, we find that emotions mediate the relationships between the CRT, perceived usefulness, and perceived ease of use. Together, the studies demonstrate that CRT segments exhibit varying emotions that predict their acceptance of these emerging technologies.

### Losing Control Behind the Wheel: How Subscription Models Shape Consumer Ownership and Fairness Perceptions

As firms increasingly shift from product-oriented to service-oriented strategies, many are embedding add-on features into physical products while restricting access through subscription-based activation. This research examines how consumers respond to this emerging purchase model in the automobile industry. Study 1 uses web-scraped Reddit discussions and topic modeling to explore consumers' reactions to subscription-based locked features, identifying perceived price unfairness and reduced psychological ownership as two central areas of concern. Building on these findings, Study 2 uses a scenario-based experiment to examine how subscription-based access, compared with upfront payment, influences consumers' purchase intentions through these two mechanisms. The experiment also investigates whether feature innovativeness and feature type, specifically safety versus convenience, shape consumers' responses to subscription-based add-on features. The research contributes to the literature on psychological ownership and pricing by showing how firms' continued control over features embedded in legally owned products can transform a pricing decision into broader judgments about fairness, control, and ownership.
